

A CULTURE OF SAFETY ENSURES LEGAL COMPLIANCE

SAFETY TRAINING \neq SAFETY COMPETENCE

Validation of competence is critical.

Tracking time sensitive tickets and certificates to meet government and industry regulations fulfills paper compliance.

Unfortunately what is on paper does not equal **Employee Competency** in the field. The confirmation of safety **Competence** occurs through validation and tracking of employees' true ability and performance as well as notification and tracking of time sensitive tickets and certification which can be performed efficiently by UTRAC™.

Breeze and its UTRAC™ competence validation system support managing regulatory compliance through:

- **The development of job-specific competencies – through which the job-specific hazards can be identified**
- **The development of job profiles that serve as documentation for safe working policies and practices**
- **The identification and support of specific training requirements for filling identified gaps**
- **The insistence of the validation of competencies with a qualified Validator, who is a subject matter expert, as the basis for meeting policy standards**
- **A system to manage the true employee competencies and ensure the compliance strategies are implemented**

OUR UTRAC COMPETENCE VALIDATION SYSTEM IS DEFENSIBLE IN COURT

Safety Competence will alleviate the concern of **Bill C45's** amendment to the **Criminal Code (217.1)** that is, not only the organization can be fined, but employees from front line to CEO can be **criminally prosecuted**. When managers and employees use UTRAC™ correctly, they demonstrate overall due diligence for safety.
